

How to Make WINDOW CLINGS

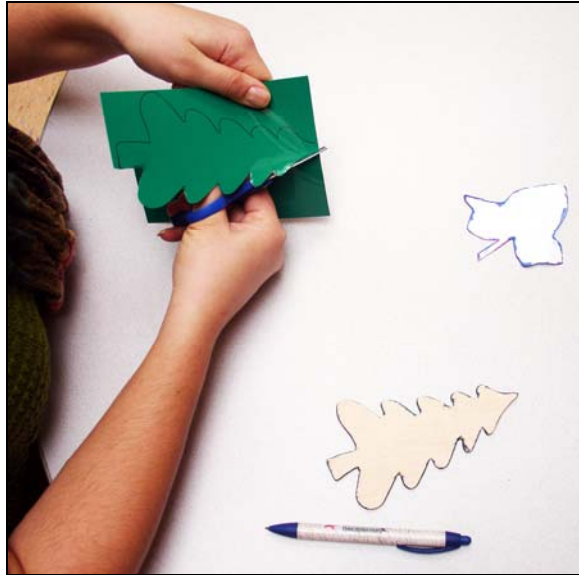

Step 1: Buy static window cling material from your local art supply store. You will also need scissors and some stencils (you can buy ready-made stencils or make your own).

Step 2: Place your stencil on top of the cling material and trace the outline with a pencil or marker.

Step 3: Use scissors to cut out your design by following the traced outline.

Step 4: Apply the finished clings to the outside of your window! Use your finger to smooth out any air bubbles. No adhesive is required. To be the most effective at saving birds, clings should be spaced no more than 10" apart over the entire window.
